

**NERAK systems**  
for bulk and packaged goods

**NERAK**  
FÖRDERTECHNIK

## Our strengths lie in quality, flexibility and the rubber block chain

|| Where bulk and packaged goods are concerned, the name NERAK is synonymous with reliable and cost-efficient conveyor systems for vertical transport.

By combining pioneering technology with high quality standards, NERAK has succeeded in becoming the market leader in this sector in just 25 years.

We have spent many years developing the rubber block chain to create the modern solution for driving vertical conveyors today.

Thanks to our global network of sales and service we are able to maintain close customer contact with a personal touch, for OEM's and end users alike.

Every conveyor system is tailor-made to meet the customer's specific requirements. And if you wish, we can also develop individual solutions working jointly with you.

*Availability of spare parts guaranteed by a generous stockpile of rubber block chains (see illustration below).*

**|| Know-how and experience are the key to our success.**

As we are a medium-sized enterprise, occupying floor space of more than 10,000 square metres with a total workforce of 170 motivated and trained staff, the work climate at NERAK is characterized by a family atmosphere.

It goes without saying that our engineers use up-to-date ERP and 3-D CAD software systems.

State-of-the-art manufacturing processes, including high-quality rubber processing, automated sheet-metal forming, welding robots and environmentally-friendly painting systems, all contribute to our aim of producing high-quality.

We focus on in-house production which, combined with state-of-the-art production systems, results in fast reaction times. This is what makes us so flexible.

Customer service is our top priority. Even when the conveyor systems have been completed, we guarantee technical aftercare and a constant availability of spare parts for assembly and maintenance work.

*By providing a high-level of in-house production we can guarantee high quality standards.*

## Conveyor systems for industry and the services sector

**|| No matter how diverse your requirements may be, NERAK has the solution.**

Quality, reliability and cost-effectiveness around the clock, every day of the year. This is our benchmark for success.

This is recognized by NERAK customers all over the world. And this is why they decide in favour of NERAK vertical conveyor systems, time and time again. NERAK has become established in:

- More than 1000 applications in postal centres, from USA to South Korea
- Numerous airports all over the world (at Frankfurt/Main airport alone, more than 50 systems have been installed)
- Almost all leading automotive manufacturers
- Global washing powder manufacturers
- Many well-known coffee roasters
- Numerous German mixing plants for building materials

The applications are diverse, ranging from powdered potatoes to lumps of ore, from newspapers to loaded europallets. And NERAK has a spectrum of customers to match: a fish processor in Australia, a manufacturer of refractory material in Siberia, a diaper manufacturer in Mexico and a producer of smart phones in China.

*Our customers include the German Postal Service, Solvay and Frankfurt Airport.*

## NERAK always has the right solution

**|| On an upward trend with the rubber block chain. The state-of-the-art and cost-effective solution for transporting bulk and packaged goods.**

At the heart of every NERAK conveyor drive system is the heavy-duty rubber block chain. The rubber block chain gets its high tensile strength from embedded vulcanized steel cables.

The NERAK rubber block chain runs quietly, requires no lubrication, is virtually maintenance-free and is extremely resilient. All these properties make it the ideal drive system for vertical conveying. The embedded steel cable means that elongation is negligible. Material is available in a variety of qualities, appropriate to the particular application.

NERAK continuous and pendulum bucket conveyors provide the ideal solution for transporting bulk goods gently and reliably between 2 levels in a combination of horizontal and vertical transport without additional transfers points.

The space-saving systems are characterized by their high availability and versatility. Such systems are employed in the food and heavy industries.

NERAK S-conveyors, too, are able to transport a wide variety of packaged goods at a high throughput rate where space is restricted. It could be air luggage or loaded europallets. In fact, there is practically nothing that can't be handled by NERAK vertical conveyor systems. They are not only virtually maintenance-free but also energy-efficient.
